1. If searching among a large number of hyperparameters, you should try variather than random values, so that you can carry out the search more system on chance. True or False?	
True	
○ False	
Correct	
2. Every hyperparameter, if set poorly, can have a huge negative impact on hyperparameters are about equally important to tune well. True or False: True False Correct Yes. We've seen in lecture that some hyperparameters, such as the lear more critical than others.	
1/1 points	
3. During hyperparameter search, whether you try to babysit one model ("P train a lot of models in parallel ("Caviar") is largely determined by:	anda" strategy) or
Whether you use batch or mini-batch optimization	
The presence of local minima (and saddle points) in your neural r	network

Hyperparameter tuning, Batch Normalization, Programming Frameworks

Quiz,	10	questions	

The number of hyperparameters you have to tune

1/1 points

4.

If you think β (hyperparameter for momentum) is between on 0.9 and 0.99, which of the following is the recommended way to sample a value for beta?

```
\bigcirc
```

```
1 r = np.random.rand()
2 beta = r*0.09 + 0.9
```

```
1 r = np.random.rand()
2 beta = 1-10**(- r - 1)
```

Correct

```
1 r = np.random.rand()
2 beta = 1-10**(- r + 1)
```

C

```
1 r = np.random.rand()
2 beta = r*0.9 + 0.09
```

Finding good hyperparameter values is very time-consuming. So typically you should do it once at the start of the project, and try to find very good hyperparameters so that you don't ever have to revisit tuning them again. True or false?

True

False

Correct

6. In batch normalization as presented in the videos, if you apply it on the lth layer of your Hyperparameter things Batch Maringalization, Programming 10 10/10 points Frameworks (100.00%) $z^{[l]}$ Quiz, 10 questions Correct $b^{[l]}$ $W^{[l]}$ $a^{[l]}$ 1/1 points 7. In the normalization formula $z_{norm}^{(i)}=rac{z^{(i)}-\mu}{\sqrt{\sigma^2+\varepsilon}}$, why do we use epsilon? To have a more accurate normalization In case μ is too small To avoid division by zero Correct To speed up convergence 1/1 points Which of the following statements about γ and β in Batch Norm are true? They set the mean and variance of the linear variable $z^{[l]}$ of a given layer. Correct There is one global value of $\gamma \in \Re$ and one global value of $\beta \in \Re$ for each layer, and applies to all the hidden units in that layer.

eta and γ are hyperparameters of the algorithm, which we tune via random

Un-selected is correct

sampling.

Hyperpai Framewo Quiz, 10 questio	rame orks	They can be learned using Adam, Gradient descent with momentum, or RMSprop, not just with gradient descent.			
	Correct				
	~	1 / 1 points			
		raining a neural network with Batch Norm, at test time, to evaluate the neural rk on a new example you should:			
	0	Perform the needed normalizations, use μ and σ^2 estimated using an exponentially weighted average across mini-batches seen during training.			
	Corre	ect			
		If you implemented Batch Norm on mini-batches of (say) 256 examples, then to evaluate on one test example, duplicate that example 256 times so that you're working with a mini-batch the same size as during training.			
		Skip the step where you normalize using μ and σ^2 since a single test example cannot be normalized.			
		Use the most recent mini-batch's value of μ and σ^2 to perform the needed normalizations.			
	~	1/1 points			
	10. Which all that	of these statements about deep learning programming frameworks are true? (Gapply)	Check		
		Deep learning programming frameworks require cloud-based machines to run	٦.		
	Un-se	elected is correct			
		A programming framework allows you to code up deep learning algorithms with typically fewer lines of code than a lower-level language such as Python.	ith

Quiz, 10 questions

Even if a project is currently open source, good governance of the project helps ensure that the it remains open even in the long term, rather than become closed or modified to benefit only one company.

Correct
